

Subject: Recommendation for Sidney Katz

To whom it may concern,

It is my sincere pleasure to know and work with Sidney Katz and I believe he would be a valuable addition to your organization and team. I have worked with Sid for about six months overseeing his internship with Genesis Healthcare Partners as a Clinical Data Analyst Intern.

I have consistently been impressed with the breadth of understanding of math, physics, and software Sid has displayed during his time at Genesis as well as his determination and character.

Sid is incredibly intelligent and consistently motivated to tackle hard problems with persistence. Though he was generally unfamiliar with the research topics we address at Genesis, Sid was able to develop an understanding of the clinical goals and processes quite quickly and began contributing to the development of software and analytics that contribute to our patient care.

During his time with us Sid has assisted in troubleshooting database and coding problems with proprietary software in use for Oncology care administration. Additionally, he has developed reporting tools accessible via an internet browser and shared locations which are incorporated into clinical care and follow up to improve patient outcomes. Throughout this process Sid familiarized himself with coding languages, database management, and software development in order to accomplish his tasks.

Sid is a very curious and altruistic individual and it is a true joy to watch his growth at Genesis, even over such a short amount of time. If there is something he has not encountered before or if he experiences blockers Sid will not hesitate to seek out the information and resources that will enable him to complete his goal.

I am confident that with a conducive environment and engaging problems Sid would prove a productive and impactful member of your team who continues his growth at an exceptional pace. Please let me know if you have need for additional information about Sid or his engagement with Genesis Healthcare Partners.

Sincerely,

Rose Prime
Clinical Data Analyst and Project Manager
